RED WING NURSERY

RED WING

MINNESOTA

MAXWELL SARGENT
Owner

Growers of Choice Nursery Stock

GUARANTEE

The RED WING NURSERY guarantees all stock to be in first class condition when it reaches you, and we will replace without charge any that does not, if we are notified within 10 days of receipt of the goods. Plants failing to grow the first summer, after having been given proper care will be replaced at one-half the original price, provided we are notified of such failure by Sept. 1st, 1951.

APPLES

4 to 5 ft. \$1.00 each; 5 to 6 ft. \$1.25 each
(Except where noted)

SUMMER APPLES

BEACON is a relatively new variety of Duchess season, but is probably better than Duchess. Its superiority in quality, uniformity of size and high color make it our best early apple.

DUCHESS is still in demand and is very good for cooking.

ORIOLE (Minn. #714) was named in 1949. It produces large, striped fruit, excellent for both eating fresh and for cooking.

FALL APPLES

CORTLAND is of McIntosh type tho of better color and hangs to the tree very well. It is grown commercially on a large scale.

LAKE LAND (Minn. #978) is a new all-red one ripening just after Wealthy

MCINTOSH is still a standard for dessert quality.

MINJON is a beautiful red variety. In quality it is similar to Jonathan, but Minjon is hardy here.

REDWELL is similar to Wealthy, but colors better and hangs to the tree better in windy weather.

WEALTHY has stood the test for a good long time and is still much planted.

VICTORY is another of the McIntosh type, but is slightly later and a little hardier for northern plantings.

WINTER APPLES

RED DELICIOUS when top-worked on hardier stock is just a fairly safe bet in this vicinity.

FIRESIDE is one of the highest quality apples of any produced at the University Fruit Breeding Farm. The color is about half red, the rest yellow. The tree is hardy and has good fruiting habits.

HARALSON has been very widely planted in Minnesota and is a dependable producer of red, high quality fruit.

MINNETONKA BEAUTY is new and yet to be proved. We like it and feel that it may prove to be a very fine one. It is another red one of very high quality. (Patented) 4to5 ft \$1.25 each; 5to6 ft \$1.45

NORTHWESTERN GREENING is nice for cooking in particular.

PRAIRIE SPY colors from half to three fourths red, is excellent both for eating fresh and for cooking, produces well and keeps well in storage. It is one of our very best.

CRAB APPLES

CHESTNUT is a large crab very good for eating fresh or for pickling.

DOLGO is our finest jelly crab. The fruit is a beautiful deep red, and makes a fine ornamental tree as well.

WHITNEY, most everyone knows, is excellent for eating fresh and a favorite for pickling.

Plant America

HELP Plant America FOR:

- (1) A permanent America
- (2) A more productive America
- (3) A more healthful America
- (4) A more abundant life on the farm

PLUMS

4 to 5 ft. \$1.25 each
5 to 6 ft. 1.50 each

KAGA is a good quality fruit which is of primary value as a POLLENIZER for the other varieties, both of which by themselves are almost completely self-sterile.

MOUNT ROYAL is a blue, European type plum, of particularly high qualities for all purposes. The tree is apparently self-fertile and bears heavily. It looks promising.
3 to 4 ft. \$1.25 each

SUPERIOR is perhaps our finest mid-season American type plum. It produces heavily large, high quality dark red fruit.

UNDERWOOD produces bright red fruit ripening early and very pleasing to eat fresh.

CHERRY-PLUM

4 to 5 ft. \$1.25 each
5 to 6 ft. \$1.50 each

COMPASS is used as a POLLENIZER for Oka and Sapa. For pie making this variety is very good in its own right.

OKA bears large fruit which is purple both inside and out, is free stone, sweet and juicy. Both Oka and Sapa are popular varieties and are really very delectable fruits. They should be grown more like bushes than trees. They are very heavy producers.

SAPA is similar to Oka, ripening slightly earlier.

PEARS

4 to 5 ft. \$1.25 each
5 to 6 ft. \$1.75 each

BANTAM is a heavy producer of medium to small size fruit. This is considered our hardiest Pear and is the most resistant to Fire-Blight of any variety grown here.

GOLDEN SPICE (Minn. #4) has a pleasant, mildly tart, spicy flavor. It is fair for dessert use and very good for sauce or pickling. The fruit is rich yellow in color and of small size.

PARKER is a large fruited variety of particularly high quality, ripening yellow with a red blush.

BUSH CHERRIES

KOREAN CHERRIES 2to3 ft. \$1.00
MINNESOTA No.20 and No.57

This cherry makes a bush about 4 feet high. The fruit is about the size of a sour cherry and is blackish-red in color. In quality of fruit it is the closest to the western sweet cherry of any produced in Minnesota. Plant both varieties for good pollination.

NANKING CHERRIES 2-3 ft. \$1.00
3-4 ft. 1.25

ORIENT (Minn. #63) This species of cherry grows about 6 feet high, the bush being a fine ornamental as well as fruit plant. The fruit is produced in profusion, is small and bright red in color, and is good eaten fresh and excellent for jelly making.

MINNESOTA #64 is similar to Orient, the fruit slightly smaller. Nanking cherries seem to be self-fertile, so it is not necessary for you to plant both varieties.

SOUR CHERRY

EARLY RICHMOND seems to be the variety most frequently planted in this region. 5-6 ft. \$1.75 ea

GLADIOLUS BULBS No. 1 Size
\$1.00 per dozen; \$8.00 per 100
Elizabeth the Queen - lavender
Lady Jane - Light yellow
Leading Lady - Creamy white
Maid of Orleans - White
Margaret Fulton - pink
Mother Kadel - Chrome yellow
Picardy - Salmon pink
Pink Radiance - Pink
Red Charm - Deep red
Snow Princess - White

DAHLIAS 60¢ each; 3 for \$1.50
The Commodore - Huge yellow
Jane Cowl - Bronze & salmon
Mrs. I. de Warner - Lavender
Dr. Tevis - Salmon and rose
Thomas Edison - Royal purple
King Alfred - Red with light reverse.
Premier's Winsome - Soft pink
Bride's Bouquet - White cactus

SMALL FRUIT PLANTS

ASPARAGUS 2 yr. old plants
25 for \$1.25
MARY WASHINGTON - a popular rust
resistant variety.

CURRENT 2 yr. Heavy
60¢ each; 6 for \$3.20
RED LAKE seems to be the finest
variety at the present time.

GOOSEBERRIES 2 yr. Heavy
75¢ each; 6 for \$3.90
PIXWELL is probably the best that
we could offer. It produces
heavily, the fruit is large
green turning pink, and the
thorns seem less objectionable
than ordinary.

GRAPES 2 yr. No. 1 40¢ each
6 for 2.25
BETA is entirely hardy and a vig-
orous grower. The fruit is fine
for jelly or juice.

CONCORD is a standard of quality
in black grapes. If the season
is long enough and the vines
are covered each winter, Concord
is hard to beat.

FREDONIA approaches Concord in
quality, but ripens earlier and
is generally a more dependable
in most seasons in Minnesota.

These three varieties list-
ed below were produced at
the University of Minnesota
Fruit Breeding Farm, and are
all high quality, hardy var-
ieties.

BLUE JAY - Blue-black
MOONBEAM - White
RED AMBER - Red
2 yr. Heavy plants 75¢ each

RED RASPBERRIES

LATHAM is the most widely grown
variety in America, and we re-
commend it as probably the best
one for this region.
No. 1 plants: 25 for \$3.50
100 for 12.75

CHIEF ripens a little earlier than
Latham and is also a very sat-
isfactory variety in Minnesota.
No. 1 plants: 25 for \$3.50
100 for 12.75

INDIAN SUMMER seems to be our
best Everbearing sort for Minn-
esota. While it is usually not
early enough with its second
crop, the first one is as large
as Latham and some seasons you
may get a fall crop as well. The
quality of the fruit is excel-
lent. No. 1 plants: 25 for \$4.00
100 for 14.50

STRAWBERRIES - June Bearing

ARROWHEAD was introduced a few
years ago by the University Fr-
uit Breeding Farm. It is of fine
quality for home use, and is
a good plant maker.
100 for \$2.75

DUNLAP is still one of the most
popular. 100 for \$2.50

PREMIER is the principal commer-
cial variety in Minnesota. The
fruit is of a little higher
quality than Dunlap, but re-
quires better soil to do well.
100 for \$3.00

- Everbearing

EVERMORE is a quite new one. It
does make runner plants freely
and in many localities it is pr-
oving to be a very desirable va-
riety.
25 for
100 for \$4.00

GEM is an older and deservedly
popular variety. It runs freely
and is generally very satis-
factory for the home grower.
100 for \$4.00

BLACK RASPBERRIES

CUMBERLAND seems to be the most
satisfactory variety here.
No. 1 Transplants: 25 for \$4.00
100 for 13.50

PURPLE RASPBERRIES

SODUS This sort seems to be be-
coming increasingly popular each
season. The fruit is large and
juicy, and is produced in larger
quantities per plant than either
reds or blacks. For freezing,
for canned sauce, or for jam
these purple raspberries are
just hard to beat.

No. 1 Transplants 25 for \$4.00
100 for 13.50

No. 1 Tips 25 for 3.00
100 for 11.00

RED RHUBARB

CANADA RED is one of the newer
red varieties and certainly one
of the best grown.
60¢ each; 5 for \$2.40

DWARF SHRUBS 2 to 4 feet

ALMOND, DOUBLE FLOWERING, PINK, is similar to Flowering Plum, except that this one makes a smaller bush.

ALPINE CURRANT is rather slow growing and compact in form, is entirely hardy and an excellent shrub generally. It has no showy flowers, just good, clean, rich green foliage. It will tolerate considerable shade.

BARBERRY, Green Leaf, makes a beautiful specimen plant. Its foliage is good and colors vividly in the fall; it has attractive red berries and makes a most graceful shrub. To keep it looking its best one must cut out about half of the old canes each year.

BARBERRY, Red Leaf - This Barberry is less hardy than the one above, but even with some branch winter-killing it is worth while because of its bright summer color.

HYDRANGEA, Hills of Snow
(Hydrangea arborescens)
This is the one with the large flat clusters of white blooms in June and July.

HYDRANGEA, Pee Gee, has large cone shaped flower heads of white, turning pink. Both varieties of Hydrangea should be heavily pruned each winter for best blooms. Both tolerate considerable shade, but also require a spot where moisture is well held.

SPIREA Anthony Waterer - This dwarf Spirea is showy for its flat clusters of bright red flowers in early summer, then again in late summer.

SPIREA, Froebel's is very similar to Anthony Waterer, tho is hardier and has pink blooms and very good reddish fall foliage color.

TREES and SHRUBS are the skeleton of any well planned grounds beautification development and are the first consideration in landscape planning. Then add the plants which are grown primarily for bloom.

SHRUBS 3 to 5 feet

BURNING BUSH, Winged Bark - Among the smaller shrubs this one is one of the half-dozen best. The corky wings of bark are interesting and the shrub is slow enough growing that it does not grow out of place quickly. The foliage colors bright red in the fall.

MOCK ORANGE, Lemoine - This is a finely branched, small leaved variety, with attractive, fragrant white flowers in June. This is another of the half-dozen best shrubs of this size.

SHRUBS 5 to 7 feet

ARROWWOOD - In our landscape planning we use this plant frequently. It is entirely hardy, is of upright habit, has attractive rugose foliage and clusters of purple berries.

COTONEASTER, PEKING, is a trim, dressy, glossy leaved shrub, very fine for planting where there is little shade to bother it. Its habit is upright and somewhat arching.

ELDER, Golden - Here is a good spreading plant for accent in summer color.

NANKING CHERRY makes a fine ornamental shrub, and is at the same time valuable for its fruit. The flowers are light pink, produced in great profusion. It also fruits heavily, the cherries being bright red or orange-red in color and very good for sauce or jelly.

NANNYBERRY (*Viburnum lentago*) This shrub has glossy, leathery leaves and is a somewhat loose shrub of upright habit. Clusters of white flowers appear in June, then purple berries the rest of the summer. The fall foliage color is very attractive and showy. It is more suitable for border work than against the house, usually.

NINEBARK, Common - Along with Arrowwood and Persian Lilac this is one of the "work horses" of the informal border. For small properties where a border of only medium size is desirable, this shrub works in well.

NINEBARK, Dwarf, is a fine textured shrub, upright or slightly spreading in habit, making a neat symmetrical appearance. It is really a first class shrub in every respect.

SPIREA, SNOW GARLAND This is the earliest Spirea to bloom, the shrub becoming a mass of snowy garlands before the leaves appear.

WEIGELIA, Bristol Ruby (Pat. 492) This shrub makes a nicely rounded specimen. The foliage is dark green and quite heavy. The flowers are in evidence thru most of the summer and are garnet-red.

MOCK ORANGE "MINNESOTA SNOWFLAKE" (Pat. 536) We have replaced the popular Virginal variety with this new one, as it seems superior to it in every respect. The flowers are large, white, double, and very fragrant.

PERSIAN LILAC - This Lilac is a shrub with slender, arching branches. The foliage is finer than that of Common Lilac, and the flowers are reddish-purple in huge tresses. It does not sprout from the root objectionably.

PLUM, Double Flowering (Rose Tree of China) - The very beautiful dark pink blooms in early spring have made this a favorite.

PURPLE LEAF PLUM (*Prunus cistena*) This shrub is a rather upright grower, thereby not requiring lots of room, and adds a splash of color for the border planting.

SPIREA, Bridal Wreath - The arching branches well loaded with clusters of white bloom have made this a favorite for a long time.

WAYFARING BUSH (*Viburnum lantana*) The branches and foliage of this shrub are rather coarse textured. It produces brilliant red berries in July and August. There is an individuality about this shrub which we like.

LANDSCAPE SERVICE

A large part of our business is doing LANDSCAPE work. If you have a planting problem with which you would like help, we will be glad to prepare a planting sketch for you if you will send us a detailed description of the yard and buildings to be landscaped. Or we will be glad to call at your home if it is not too far away, and look over your problem. While this is professional service we make it without charge. But please make your request early. After March 15th we are busy with other things.

SHRUBS 7 to 10 feetCARAGANA (Siberian Pea)

The foliage of this one could be better, but the plant has a place to fill where the soil is particularly poor and other things will not do well.

CRANBERRY, Hi-Bush, is one of our best shrubs for use as a screen or in the border planting. The large clusters of bright red berries are a principal asset and are indeed very showy thru the fall and winter.

DOGWOOD, Red Twig, is fine for accent in winter color in the shrub border.

PAGODA DOGWOOD is one of our native shrubs, which, because of its habit of producing its branches in more or less flat layers, can often be used for planting around ranch type homes. Also it is good for the shaded border planting.

HONEYSUCKLE, Zabell's, is a red flowered variety of one of the very best of the larger growing shrubs.

LILAC, French Hybrids

Charles Joly: Double dark red
Ludwig Spaeth: Single dark red

TAMARIX—This shrub is best used in combination with others as it is not a specimen type. The foliage is feathery-fine, and it produces similarly textured flowers thru the summer.

DWARF and FLOWERING TREES

ALMEY CRAB 12-15 feet, comes to us from Canada. The blossoms are bright flaming red, very showy. The fruits are small, scarlet, and hang on into the winter.
4 to 5 feet \$3.00 each

HOPA CRAB 12-15 feet. Hopa is an upright grower and produces enormous quantities of dark pink flowers. All three of these crabs are excellent ornamental trees.
4-5 ft. \$1.50; 5-6 ft. \$2.00 each

RED SILVER CRAB 10-12 feet. The flowers of this one are deep red, the foliage is reddish all summer and the small fruits are very dark red. The branches of Red Silver are a little more spreading than Hopa.
4-5 ft. \$1.50; 5-6' \$2.00 each.

RUSSIAN OLIVE 12-15 feet. This is a spreading, rather picturesque tree with fine textured, silvery foliage. 4-5 feet \$1.50 each

HEDGES

ALPINE CURRANT is hard to beat for a hedge one and one-half to three feet high. It branches freely and low. Plant 12 to 18 inches apart.

COMMON BUCKTHORN is probably the best of the larger growing hedges to be kept 3 to 5 feet high. It requires four or five dippings a year. Plant 12 inches apart.

HONEYSUCKLE (Pink tatarian) can be used as a clipped hedge, but is best used where a screening hedge 12 to 15 feet high is needed.

CARAGANA is of particular value in poor soil where others will not thrive. Clips to 3 to 5 feet. Untrimmed will get about 10 feet.

AMUR MAPLE (Acer ginnala) is recommended for use as a large clipped hedge in rural areas where common Buckthorn is inadvisable because of the fact that it is alternate host to Oat Rust. Clips 4 to 6 feet. Plant 18 to 24 inches apart for clipping, and about 4 feet otherwise.

BRIDAL WREATH SPIREA trims 2 to 4 feet very nicely, making a thick hedge way to the bottom. Plant 18 inches apart.

AMUR MAPLE (Acer ginnala) 12-15 ft. This tree grows slowly and branches from near the ground, has foliage similar to Cut Leaf Birch in form, and colors bright red in the fall. 4-5 ft. \$2.00 each

PURPLE LEAF PLUM 6-10 feet. For unusual foliage color this is a good plant. 3-4 ft. \$2.00 each

MOUNTAIN ASH 15-18 feet. This is a nice symmetrical and dressy tree, and has clusters of orange-red berries. 6-8 feet \$3.00 each
8-10 feet 3.50 each

CHOICE EVERGREENS

ARBOR VITAE (White Cedar) has flat, fan-like leaves of rich green color. **AMERICAN** Arbor Vitae is useful as a broad, medium tall shrub if kept lightly clipped. It will take partial shade well. **PYRAMIDAL** is the common tall, slender variety. It also tolerates some shade and it is most dependable where it has a little protection from the south, particularly in the winter. **SIBERIAN** Arbor Vitae is a compact, bushy evergreen shrub, growing 4 to 5 feet tall and about 3 feet wide. It is an excellent landscape plant.

SPREADING JUNIPERS

ANDORRA is a Juniper trailing close to the ground. The green color of summer turns a beautiful bronzy-purple during the winter. **PFITZER** has grayish-green foliage. It will grow 2 to 3 feet tall and spreads twice as wide, tho it may be kept small by judicious pruning. It is our most versatile and dependable Juniper of its class. **SAVIN** has a beautiful bright green color and, together with Pfitzer, is much used as foundation planting material. While it will not endure much shade and still remain pretty as Pfitzer will, for sunny locations it is excellent.

UPRIGHT JUNIPERS

DUNDEE is our finest variety of grafted Eastern (native here) Red Cedar. The foliage of Dundee keeps thick and luxuriant, and it has a fine upright habit of growth. **CANNARTI** (Variety of Eastern Red Cedar) This variety is a somewhat loose textured plant. The foliage color is a very good rich green the whole year around. **SILVER** or **WESTERN RED CEDAR** These are seed grown so there is considerable variation in them, but by personal selection you can match them very well. Do not plant in shade. **VIRGINIANA** (Eastern Red Cedar - native to Minnesota) By regular attention to shearing this green foliated native juniper can be very satisfactory. Its winter foliage color is a bronzy-purple. **WELCHI** (Variety of Western Red or Silver Cedar) Here is indeed a beautiful compact and upright grower. The foliage is a soft silvery green. It requires very little shearing to be kept smooth. Do not use in shade.

PINE

AUSTRIAN is perhaps the most beautiful of the large growing Pines, making a very handsome specimen tree. **MUGHO** is a low and compact long-nedled Pine, making a very usable mound of foliage.

SPRUCE

BLACK HILLS Next to the Colorado Spruce, this one is used the most in landscape work. The foliage is dense and of good color. **COLORADO** Spruce varies in color from rich green to very bluish. Both this and the Black Hills variety are hardy in the extreme.

JAPANESE YEW

This evergreen is by all odds the finest kind for planting in **SHADE** where a spreading shrub 2 to 3 feet high and 3 to 4 feet wide, or an upright one 4 to 6 feet tall is needed.

SHADE TREES

BASSWOOD is one of the faster growing of the better native trees. It makes a smooth outline and is generally quite a dressy tree.

BIRCH, Cut Leaf Weeping, is one of our most beautiful trees, having finely cut foliage and long drooping branches.

BIRCH, White - The native variety

ELM, American, is the familiar, native sort with high spreading crown.

ELM, Lake City, is a grafted form of American Elm and makes a somewhat narrower headed tree.

HACKBERRY should not need to be described, but it is used less than it merits. It is an excellent street and yard tree, makes fairly rapid growth, a nice shape, and has especially strong crotches.

HONEY LOCUST, Thornless Its open, graceful crown of fine foliage and somewhat pendulous branches make it a splendid ornamental. Grass will do well beneath it as its shade is not dense.

MAPLE, Crimson King (Patent 735) is similar to Schwedleri, but retains its striking color all summer.

MAPLE, Hard or Sugar, is the common native one which colors so brilliantly in the fall.

MAPLE, Norway, is a thick foliaged, dome shaped tree. Its dark green leaves hang on two weeks after the leaves of Hard Maple have fallen.

MAPLE, Schwedleri, is well known for its bright red-purple foliage in spring and early summer.

POPLAR, Bolleana, is the tall, spire-like tree with bluish bark, and dark green foliage with a silvery underside.

POPLAR, Lombardy, is the other and perhaps more common spire-like Poplar having plain green leaves.

WILLOW, Niobe Weeping, makes an interesting background tree, and is particularly good used near water. Grass does not do well beneath it.

PRICES OF SHADE TREES

VINES

BOSTON IVY For a brick or stone wall this is the best we could offer. It clings closely, is a somewhat slow grower and makes a very trim vine.
2 yr. plants 75¢ each

CLEMATIS Standard size \$1.25 each

Jackmani - Purple

Mad. Andre - Red

Languinosa - White

These are all large flowered, hardy varieties.

CLIMBING HONEYSUCKLE

Heckrottii- This is a first class vine for trellis or arbor. The flame colored, trumpet shaped flowers are in appearance all summer long. 2 yr. plants 75¢ each

SHELTER BELT TREES

Every well planned farmstead includes provision for windbreak, whether it is a natural one or otherwise. It is work, to be sure, to get one going but it repays in cash just as surely as does a coat of paint on the buildings or insulation in your house. In making the planting, prepare the soil well, as you would for any field crop, and keep the planting cultivated for at least two summers, and longer if feasible. **WINDBREAK TREES RESPOND TO CARE EXACTLY AS A FIELD OF CORN DOES.** For complete information on planting distances and general layout write: Bulletin Room, University Farm, St. Paul 1, Minn., and ask for Extension Bulletin 196, "Planting the Farm Windbreak".

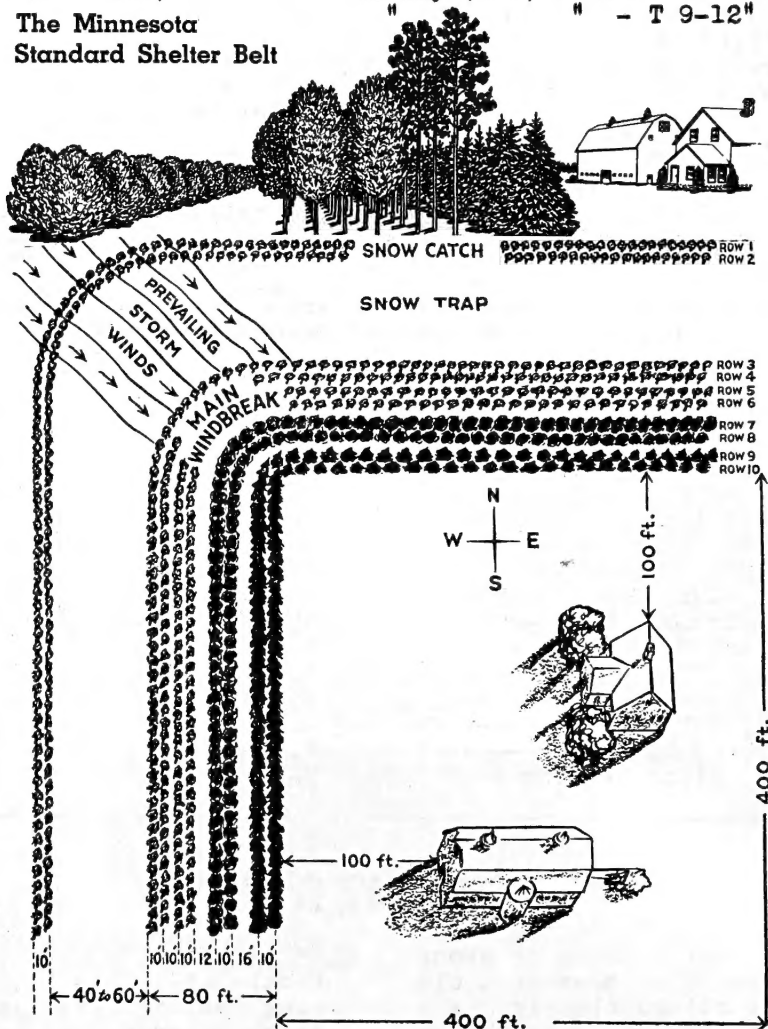

DECIDUOUS SHELTER BELT STOCK
